

SIMONS-TOWN (Hyphen)

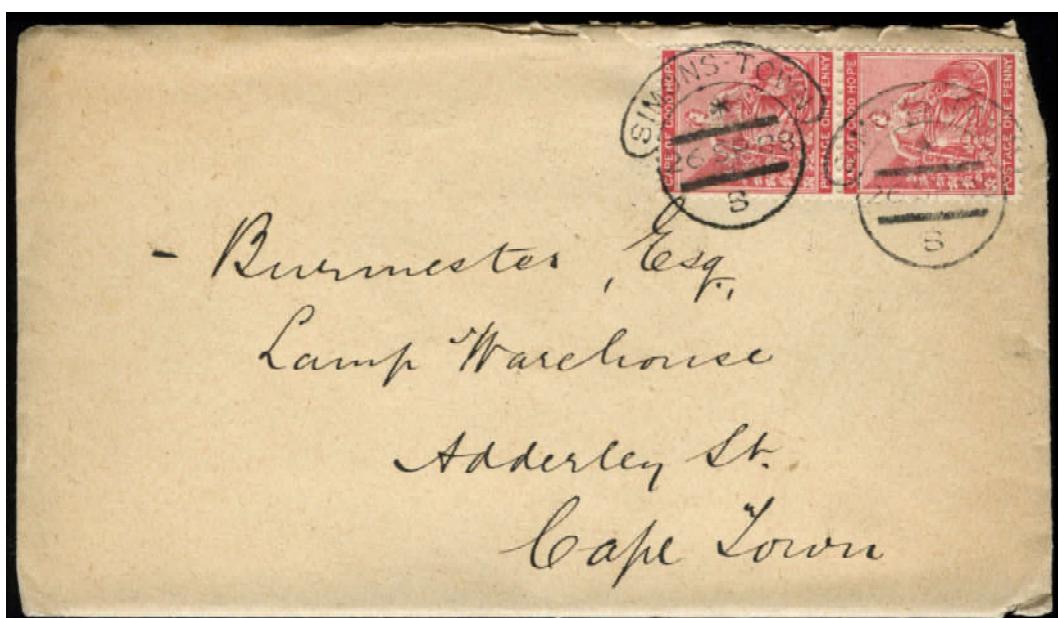

Simons Town (historically also spelt Simonstown) is the last town in our HCD review. This does not mean it is the least important. It was often one of the first to receive new Cape datestamps, a practice that began in 1817 when the CiC (Crown in Circle) handstamp was first issued to Cape Town, then to Stellenbosch, Uitenhage and Simons Town as the Cape's most important towns. The reason for the Simons Town post office's importance was because it served the needs of the Royal Navy which had been based there since 1813. While the HCD is believed to have been unpopular with most of the post offices which used it, Simon Town persisted with it longest of all, from at least June 1888 to July 1903.

Frescura lists the ER and LR for 'HC SIMONS-TOWN' as '11 JA 1889' and '10 DE 1902'.

Our research has revised these dates completely with three new ERs and an LR. The covers below were both previous ERs until displaced by our find of '26 JU 88'.

1888. Cover. SIMONS-TOWN '9 JY 88' to CAPE TOWN.

1888. Cover. SIMONS-TOWN '26 SP 88' to CAPE TOWN.

Our LR of '2 DE 03' has a notable large dot. In some of the later SIMONS TOWN HCDs this appears as almost a rectangular block. In earlier, cleaner, less worn examples of the HCD it is more typically seen as a thin hyphen. By 1900 the hyphen has morphed into this large dot / block. Is this is a new HCD 'with block separator' or is it just the effect of long use and abuse? I suspect the latter but wonder "how a thin hyphen can become so thick?" The late HCD postmarks are generally 'heavy', the result of dust and ink adhering to the handstamp during long periods of irregular cleaning and maintenance combined with general wear and tear.
